

Phase 2

Requirement Analysis Phase

Project: **Implement Client Script & UI Policy (Incident)**

Item	Details
Platform	ServiceNow (Incident Management)
Organization	SmartBridge
Team ID	SWTID-2026-3598
Team Size	5
Team Leader	VEERAMANI B
Team Members	BALAJI E, Anbumani A, NAGULAN.C, Kathir

1. Purpose

This document records the functional, non-functional, data and technical requirements of the project, together with the user stories and assumptions that guided the configuration of the Incident form.

2. Stakeholders

Stakeholder	Interest
Service Desk Agent	Wants a form that guides correct data entry and prevents mistakes.
Incident / Problem Manager	Needs high-impact incidents to be assigned quickly and consistently.
ServiceNow Administrator	Needs maintainable, no-code-first configuration.
Reporting / SLA Owner	Needs trustworthy Impact, Urgency and Priority values.

3. Functional Requirements

ID	Requirement	Mechanism
FR-01	When Impact = 1 - High, Assignment group shall become mandatory.	UI Policy 'High Impact Control' + action on assignment_group (Mandatory = True, Read-only = False)
FR-02	When the condition is no longer true, the changes shall be reverted automatically.	'Reverse if false' = true
FR-03	When Impact = High, Urgency shall be read-only.	UI Policy Action on urgency (Read-only = True, Visible = Leave alone)
FR-04	When Impact is changed to High, Urgency shall be set to 1 - High and an info message displayed.	onChange Client Script on field impact
FR-05	An Incident with Impact = High shall not be saved without an Assigned To value; an error shall display on the field.	onSubmit Client Script
FR-06	State shall not be editable from the list; the user is told to open the incident.	onCellEdit Client Script on field state
FR-07	State shall still be editable from the Incident form.	Behaviour verified in testing (Activity 5)

4. Non-Functional Requirements

- **Usability:** Messages must be clear and appear next to the relevant field.
- **Performance:** Scripts must be lightweight (no GlideRecord or server round-trips) so form load time is unaffected.
- **Maintainability:** Prefer UI Policy for declarative behaviour; use scripts only where logic is needed.
- **Compatibility:** Scripts run in strict mode with Isolate script enabled (as shown on the form banner).
- **Reversibility:** All behaviour must switch off cleanly when Impact is not High.

5. Data Requirements

Field	Internal name	Type	Role in solution
Impact	impact	Choice (1 - High, 2 - Medium, 3 - Low)	Trigger / condition
Urgency	urgency	Choice	Auto-set and made read-only
Assignment group	assignment_group	Reference (sys_user_group)	Mandatory when High
Assigned to	assigned_to	Reference (sys_user)	Required on save when High
State	state	Choice	Protected from list editing

6. Technical Requirements

- A ServiceNow instance (Personal Developer Instance is sufficient) with administrator or configuration access.
- Modules used: System UI → UI Policies, System UI → Client Scripts, Incident → Create New / Open / All.
- Modern browser with JavaScript enabled.

7. User Stories

- As a service desk agent, I want Urgency set automatically when I mark an incident High impact so that I do not create inconsistent priorities.
- As an incident manager, I want to be prevented from saving a High impact incident with no assignee so that critical issues are never orphaned.
- As an administrator, I want state changes controlled from the form only so that validations cannot be bypassed from the list.
- As a reporting owner, I want field behaviour to revert when Impact is lowered so that the form is not left in a locked state.

8. Assumptions and Constraints

- Client-side controls apply to the UI only; API, import sets and mobile apps may need server-side Business Rules for the same rules.
- The Incident table's out-of-box Priority calculation (Impact x Urgency) is retained.
- The project is a short-duration micro project; no integrations are in scope.

9. Acceptance Criteria

- Saving a High impact incident without Assigned To is blocked with an error message.
- Urgency becomes 1 - High and read-only when Impact is High.
- Lowering Impact makes Assigned To/Assignment group non-mandatory and Urgency editable.
- Attempting to edit State in the list shows the alert and leaves State unchanged.

- State can be changed and saved on the form.
