

Phase 6

Project Testing Phase

Project: **Implement Client Script & UI Policy (Incident)**

Item	Details
Platform	ServiceNow (Incident Management)
Organization	SmartBridge
Team ID	SWTID-2026-3598
Team Size	5
Team Leader	VEERAMANI B
Team Members	BALAJI E, Anbumani A, NAGULAN.C, Kathir

1. Testing Objective

To verify that every UI Policy action and Client Script behaves as specified, that the behaviour reverses correctly, and that normal operations (saving from the form) are not obstructed.

2. Test Environment

- ServiceNow instance with administrator login (System Administrator).
- Client scripts: Desktop UI type, Active, Global, Isolate script enabled.
- Test data: new Incident INC0010012 (caller Adela Cervantsz, short description 'testing UI policy') and existing incident INC0008111.

3. Test Cases

ID	Scenario	Steps	Expected result	Actual / Status
TC-01	Mandatory enforcement	Incident → Create New; set Impact = 1 - High; leave Assigned To empty; click Submit	Incident not saved; error 'Assigned To is mandatory for High impact incidents.' shown under Assigned To	As expected - Pass
TC-02	Urgency auto-set and read-only	Set Impact = 1 - High	Urgency becomes 1 - High and is read-only (greyed); Assignment group mandatory (*); Priority 1 - Critical	As expected - Pass
TC-03	Successful save	Select a user in Assigned To (e.g., Beth Anglin); click Submit	Incident saves without errors	As expected - Pass
TC-04	Reverse condition	Open incident with Impact High; change Impact to 2 - Medium	Assignment group no longer mandatory; Urgency editable; Priority recalculated; record saves	As expected - Pass
TC-05	List edit blocking	Incident → All; double-click State cell on a row and change value; confirm	Alert 'State cannot be changed from the list. Please open the Incident.'; State unchanged	As expected - Pass
TC-06	Form-based update	Open INC0008111; change State to In Progress; click Update	State change saved; list shows In Progress	As expected - Pass

4. Detailed Test Walk-through

Activity 1: Test Mandatory Enforcement

A new incident was created with Impact set to High and Assigned To left empty. On clicking Submit the onSubmit script returned false; the record was not created and the red error box appeared directly under Assigned To. The Impact policy also marked Assignment group as mandatory, and Urgency showed 1 - High in a read-only state.

Activity 2: Test Successful Save

Assigned To was populated with Beth Anglin and the incident submitted. The onSubmit script returned true and the record saved. Urgency remained 1 - High (read-only) and Priority 1 - Critical, confirming the onChange script and UI Policy behaved correctly together.

Activity 3: Reverse Condition Test

An existing High-impact incident had its Impact changed to 2 - Medium. Assigned To was no longer mandatory and the Urgency field became editable again, confirming that 'Reverse if false' works. Priority changed to 2 - High because it is calculated from Impact and Urgency.

Activity 4: Test List Edit Blocking

In the Incident list the State cell of INC0008111 was double-clicked and changed. The browser alert from the onCellEdit script appeared and the original State value was retained after confirming.

Activity 5: Test Form-Based Update

State was changed on the form to In Progress and saved using Update. The list afterwards displayed In Progress, proving that only list editing is blocked, not form editing.

5. Observations

- The onChange script only sets Urgency when Impact becomes High; it does not change Urgency back when Impact is lowered, so the value remains until a user edits it (the field is editable again after the reverse).
- Because Urgency is read-only under High impact, the only way to set it is through the script - this is intentional and keeps Priority consistent.
- Client-side rules do not execute for API or import-set updates.

6. Defect Log

ID	Description	Severity	Status
-	No functional defects found in executed test cases	-	Closed

7. Conclusion

All six test cases passed. The solution meets the acceptance criteria defined in the Requirement Analysis phase.
