

Phase 8

Project Demonstration Phase

Project: **Implement Client Script & UI Policy (Incident)**

Item	Details
Platform	ServiceNow (Incident Management)
Organization	SmartBridge
Team ID	SWTID-2026-3598
Team Size	5
Team Leader	VEERAMANI B
Team Members	BALAJI E, Anbumani A, NAGULAN.C, Kathir

1. Purpose of the Demonstration

The demonstration shows the working solution end to end so that reviewers can see each control behave as designed. It should take about 8 to 10 minutes and be recorded in a single take.

2. Demonstration Prerequisites

- ServiceNow instance logged in as an administrator and awake.
- All four artefacts (UI Policy and 3 Client Scripts) set to Active.
- At least one incident with Impact = High and the Incident list open in a second tab.
- Screen recorder with microphone checked; browser zoom set for readability.

3. Demo Script (Suggested Timeline)

Time	Presenter	Segment	What to show / say
0:00-0:45	VEERAMANI B	Introduction	Project title, Team ID SWTID-2026-3598, team members, problem statement and objective
0:45-2:00	BALAJI E	UI Policy	Open System UI → UI Policies → High Impact Control; show condition, Reverse if false, Assignment group and Urgency actions
2:00-3:30	Anbumani A	Client Scripts	Open the three scripts; explain onChange, onSubmit and onCellEdit and their fields
3:30-5:00	NAGULAN.C	Live test 1 and 2	Create new incident; set Impact High; show Urgency auto-set and read-only; submit without Assigned To to show the error; then add Assigned To and save
5:00-6:30	NAGULAN.C	Live test 3	Open an existing High incident; change Impact to Medium; show Assigned To not mandatory and Urgency editable
6:30-8:00	Kathir	Live test 4 and 5	Incident list: double-click State to show alert; open form and change State to In Progress and Update
8:00-9:00	VEERAMANI B	Wrap-up	Benefits, limitations, future enhancements, thank you

Presenter assignment is a suggestion; the team may split segments differently.

4. Expected Outcomes to Highlight

- Save is blocked with a clear field-level error when a High impact incident has no assignee.
- Urgency is set to High automatically and cannot be edited while Impact is High.
- Everything reverts when Impact is lowered.
- State cannot be changed from the list but can be changed on the form.

5. Evidence to Include in Submission

Evidence	Source
UI Policy form and conditions	System UI → UI Policies
UI Policy Actions for Assignment group and Urgency	Related list
Three client script forms with code	System UI → Client Scripts
Error box on Assigned To	Incident INC0010012
Successful save with Assigned To	Incident INC0010012
Reverse condition (Impact Medium)	Existing incident
List-edit alert and State updated via form	Incident list and INC0008111
Demo video link	Cloud drive / YouTube (unlisted)

6. Likely Questions and Answers

Question	Suggested answer
Why use both a UI Policy and Client Scripts?	UI Policies handle mandatory and read-only declaratively and reverse automatically; scripts are needed for value setting, messages and cancelling saves.
Can users bypass these controls?	Client-side controls apply to the UI; API and imports need Business Rules or Data Policies, which is a planned enhancement.
What does Reverse if false do?	It undoes the policy actions when the condition stops being true, e.g. Impact changed from High.
Why is isLoading checked in onChange?	To avoid changing values when an existing record is opened.
What happens if Impact is lowered after Urgency was set to High?	Urgency becomes editable again; the script does not reset it, so the user can adjust it.

7. Demo Checklist

- Instance awake and logged in
- All scripts Active
- Test incident ready
- Recorder and audio checked
- Team roles agreed
- Final video uploaded and link added to submission
